

Executive Summary – FNP Sales Analysis Dashboard

Project Overview

The **FNP Sales Analysis Dashboard** is an interactive business intelligence solution developed to analyze and monitor sales performance, customer purchasing behavior, product demand, and delivery efficiency for an online gifting and e-commerce business. The dashboard transforms raw transactional data into meaningful visual insights that support strategic decision-making and operational planning.

The project focuses on identifying revenue trends across months, occasions, product categories, cities, and customer order timings. Interactive slicers for **Order Date**, **Delivery Date**, and **Occasion** allow users to dynamically filter and analyze data based on business requirements.

The dashboard was designed to help management:

- Track overall business performance
 - Understand customer buying patterns
 - Identify high-performing products and categories
 - Improve marketing and operational strategies
 - Optimize delivery performance and customer experience
-

Business Objectives

The major objectives of this project were:

- Analyze overall sales and revenue performance
 - Monitor customer spending behavior
 - Identify seasonal and occasion-based demand
 - Evaluate delivery efficiency
 - Discover top-performing products and categories
 - Understand city-wise order distribution
 - Support data-driven business decisions through visualization
-

Key Performance Indicators (KPIs)

1. Total Orders

The business recorded **1,000 total orders** during the analyzed period.

Insight:

This indicates stable customer engagement and consistent transaction activity across multiple occasions and product categories.

2. Total Revenue

The total revenue generated was **₹35,20,984**.

Insight:

The company achieved strong revenue performance, primarily driven by seasonal gifting demand and festival-related purchases.

3. Average Delivery Time

The average order delivery time was **5.53 days**.

Insight:

The delivery timeline reflects a reasonably efficient logistics and fulfillment process, though faster delivery could further improve customer satisfaction and retention.

4. Average Customer Spending

The average customer spending per order was **₹3,520.98**.

Insight:

The relatively high average order value suggests customers are willing to spend more on premium and occasion-based gifting products.

Revenue Trend Analysis

Revenue by Months

The monthly revenue analysis reveals strong seasonal fluctuations in sales performance.

Key Findings:

- Revenue peaks were observed during:
 - **February**
 - **August**
 - **November**
- The highest revenue was generated in **August**.
- Revenue remained comparatively lower during:
 - April
 - May
 - June

- September
- October

Business Interpretation:

The spikes correspond to festival periods and emotionally significant occasions where gifting demand increases substantially.

Strategic Insight:

The business is highly dependent on seasonal and occasion-based sales cycles.

Recommendation:

- Increase inventory and marketing efforts before high-revenue months.
 - Launch discount campaigns during off-season months to maintain steady sales.
-

Category-Wise Revenue Analysis

The dashboard compares revenue contribution across different product categories.

Top Revenue-Generating Categories

- Colors
- Soft Toys
- Sweets

These categories contributed the largest share of revenue.

Moderate Performing Categories

- Cake
- Raksha Bandhan products

Lower Performing Categories

- Plants
- Mugs

Business Interpretation:

Customers prefer emotionally expressive and celebration-oriented gifting products over utility-based items.

Strategic Insight:

Products associated with celebrations and emotional connections drive stronger customer purchasing behavior.

Recommendation:

- Expand premium offerings in high-performing categories.

- Bundle low-performing products with popular items to increase visibility and sales.
-

Occasion-Based Sales Analysis

The dashboard highlights how different occasions impact business revenue.

Highest Revenue-Generating Occasions

- Anniversary
- Raksha Bandhan
- Holi

Moderate Revenue Occasions

- Birthday
- Valentine's Day

Lower Revenue Occasion

- Diwali generated comparatively lower revenue than expected.

Business Interpretation:

Customers tend to spend more on relationship-centered occasions and family celebrations.

Strategic Insight:

Occasion-based personalization plays a major role in driving customer engagement and conversions.

Recommendation:

- Create personalized campaigns for Anniversary and Raksha Bandhan.
 - Strengthen Diwali promotions using festive offers, influencer marketing, and bundled gift packs.
-

Product Performance Analysis

Top 5 Products by Revenue

The highest revenue-generating products include:

1. Magnum Set
2. Quia Gift
3. Dolores Gift
4. Harum Pack
5. Deserunt Box

Business Interpretation:

Curated gift packs and premium products generate stronger customer interest and higher order values.

Strategic Insight:

Customers are more attracted toward ready-made premium gifting solutions.

Recommendation:

- Promote bestselling products prominently on the website homepage.
 - Introduce personalized and premium gift combinations.
 - Use recommendation systems for upselling related products.
-

Order Timing Analysis

The dashboard analyzes customer purchasing activity based on order time.

Peak Ordering Hours

Higher order activity was observed during evening and late afternoon hours.

Business Interpretation:

Customers are more active after working hours and during leisure time.

Strategic Insight:

Timing plays a significant role in customer engagement and purchase conversions.

Recommendation:

- Schedule advertisements, notifications, and email campaigns during peak activity hours.
 - Increase customer support responsiveness during high-order periods.
-

City-Wise Order Analysis

The dashboard identifies cities contributing the highest number of orders.

Top Performing Cities

High order volumes were recorded from:

- Imphal
- Kavali
- Haridwar
- Dhanbad

Business Interpretation:

Demand is geographically diversified rather than concentrated in a few metro cities.

Strategic Insight:

Tier-2 and smaller cities represent valuable growth opportunities for the business.

Recommendation:

- Improve delivery infrastructure in high-demand regions.
 - Implement city-specific marketing campaigns and localized offers.
-

Operational Insights**Delivery Efficiency**

- Average delivery duration is moderate at 5.53 days.
- Faster delivery services could significantly improve customer experience and repeat purchases.

Customer Purchasing Behavior

- Customers show strong purchasing intent during festivals and emotional occasions.
- Premium and personalized gifting products contribute higher revenue.

Seasonal Dependency

- Revenue generation is highly seasonal and occasion-driven.
 - Strategic planning before major festivals is essential for maximizing sales.
-

Business Impact of the Dashboard

The dashboard provides significant business value by enabling:

- Real-time performance monitoring
- Revenue tracking across multiple dimensions
- Better inventory planning
- Improved marketing decision-making
- Customer behavior analysis
- Operational performance optimization

The project helps convert raw business data into actionable insights that support both strategic and operational decision-making.

Final Recommendations**Sales & Marketing**

- Focus advertising and promotional campaigns before high-performing months and occasions.

- Use targeted festive marketing and personalized customer engagement strategies.

Product Strategy

- Increase focus on top-selling categories and premium gift sets.
- Improve visibility of low-performing products through bundles and combo offers.

Customer Engagement

- Introduce loyalty programs and personalized recommendations.
- Send reminder notifications for birthdays, anniversaries, and festivals.

Logistics & Operations

- Reduce delivery timelines through better logistics optimization.
- Offer express delivery options in high-demand cities.

Data & Analytics

- Integrate predictive analytics for demand forecasting.
- Use customer segmentation for targeted marketing campaigns.

Conclusion

The **FNP Sales Analysis Dashboard** successfully demonstrates how data analytics and business intelligence techniques can be used to improve decision-making in the e-commerce and gifting industry. The analysis reveals that customer purchasing behavior is highly influenced by occasions, festivals, emotional connections, and seasonal trends.

By leveraging these insights, the business can improve:

- Revenue generation
- Customer satisfaction
- Marketing effectiveness
- Inventory planning
- Operational efficiency

Overall, this project highlights the practical application of data visualization and analytics in solving real-world business problems and driving strategic growth.
